

## Communication – October 2021

---

### Delivery of our largest production line to date

This month was highlighted not only by our 35th anniversary but also by the on-schedule loading and dispatch of our largest production line built to date, a complete MFWL 063 line destined for the manufacture of multilayer composite pipes. The logistics and coordination for 6 trucks to arrive at the border at the same time for customs clearance was a particular challenge, one that was mastered successfully.

Since the weather was most favourable we were able to capture some overhead views of the splendid nature reserve and lake which we are fortunate to be located to nearby.
